

2084 and the AI Revolution

How Artificial Intelligence Informs Our Future

By John C. Lennox

KUPERARD

PUBLISHERS

In this updated and revised edition of John Lennox's bestselling book, Lennox addresses recent developments in artificial intelligence and gives readers insight into the current technological climate while still providing hope for the future of humanity.

You don't have to be a computer scientist to have discerning conversations about artificial intelligence and technology. We all wonder where we're headed. Even now, technological innovations and machine learning have a daily impact on our lives, and many of us see good reasons to dread the future. Are we doomed to the surveillance society imagined in George Orwell's 1984?

Mathematician and philosopher John Lennox believes that there are credible responses to the daunting questions that AI poses, and he shows that Christianity has some very serious, sensible, evidence-based things to say about the nature of our quest for superintelligence.

In straight-forward, accessible language, you will get a better understanding of the current capacity of AI, its potential benefits and dangers, the facts and the fiction, as well as possible future implications.

Since the questions posed by AI, daunting as they might be, affect most of us, they demand answers. 2084 and the AI Revolution, Updated and Expanded Edition has been written to challenge and ignite the curiosity of all readers. Whatever your worldview, Lennox provides clear information and credible answers that will bring you real hope for the future of humanity.

John C. Lennox is a Professor of Mathematics at the University of Oxford and Fellow in Mathematics and the Philosophy of Science at Green Templeton College, Oxford. He is author of a number of books on the interface between science, philosophy, and theology, including, *God and Stephen Hawking*, *Determined to Believe*, *Can Science Explain Everything?* and *Cosmic Chemistry: Do God and Science Mix?* Prof. Lennox is a widely recognised public intellectual who has engaged in numerous debates with public figures such as Richard Dawkins, Christopher Hitchens, Michael Ruse, and Peter Atkins on questions at the interface of science, philosophy, and religion.
